SUMMARY

After working as a technical product specialist for Google's products over the past two and a half years, I came to realize that to resolve the troubleshooting tasks I was assigned to within my project, I needed to have a more fundamental understanding of modern web development technologies, and how to quickly identify bugs and errors amidst the code in the client's assets. After all, I might be required to troubleshoot live campaigns and provide a complete resolution within a limited timeframe.

Therefore, I take it upon myself to constantly learn about emerging technologies, as well as sharpen my design skills and critical thinking. I have a strong ambition to grow as a programmer, which has been a core interest for me since an early age.

I look forward to the next challenge in my career, and I am determined to find the position in which I can contribute my skills and experiences in the best possible way.

EXPERIENCE

Creative Ads Support Specialist, Cognizant - Feb/2015 - present - Buenos Aires

- Troubleshooting client-submitted Rich Media creatives made with Google Web Designer or HTML5, CSS3 and JavaScript in DoubleClick Studio.
- Resolving technical issues caused by creative code regarding Rich Media creatives built in Google Web Designer or DoubleClick Studio.
